HIGH POWER UV DISINFECTION LAMP

PRODUCT PARAMETER

ITEM: **AR-UV-DI-02**

MODEL: **INTELLIGENT UV DISINFECTION LAMP**

VOLTAGE: **220v/110V**

POWER: **150w**

IRRADIATION AREA: **WITHIN 100m²**

SIZE: **235*200*770mm**

LAMP HOLDER MATERIAL: **STAINLESS STEEL**

LAMP MATERIAL: **QUARTZ ULTRAVIOLET LAMP**

UV STARTUP DELAY: **15 SECONDS AFTER STARTUP**

The ultraviolet disinfection lamp can purify the air, eliminate moldy odor, disinfect and sterilize, and remove mites. In addition, it can generate a certain amount of ozone ion. Especially suitable for those who have no time quit. In public places, UV disinfection can also prevent some bacteria from spreading through the air or passing through objects.

HIGH POWER UV DISINFECTION LAMP

Old Version

Old version: Liquid mercury UV tube

Old Version: Lamp Size: 250*250*1000mm

New Version (Private Design)

New Version: New Version: Solid mercury technology UV tube. Safe environmental protection, the lamp can be directly recycled after breaking; Long life, low light decay; Radiation illumination is more stable. Shorter power, high illumination.

New version: Lamp size: 235*200*770mm
Shorter size, saving freight cost.
(Save 5kg volume weight)

COMPARISON SWITCH LIGHTS

Timing Control

Timing panel control 10 minutes, 20 minutes, 30minutes, 40 minutes, 50 minutes 60 minutes timing selection.

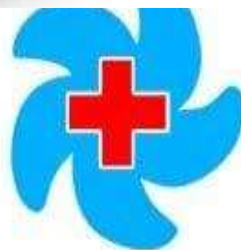

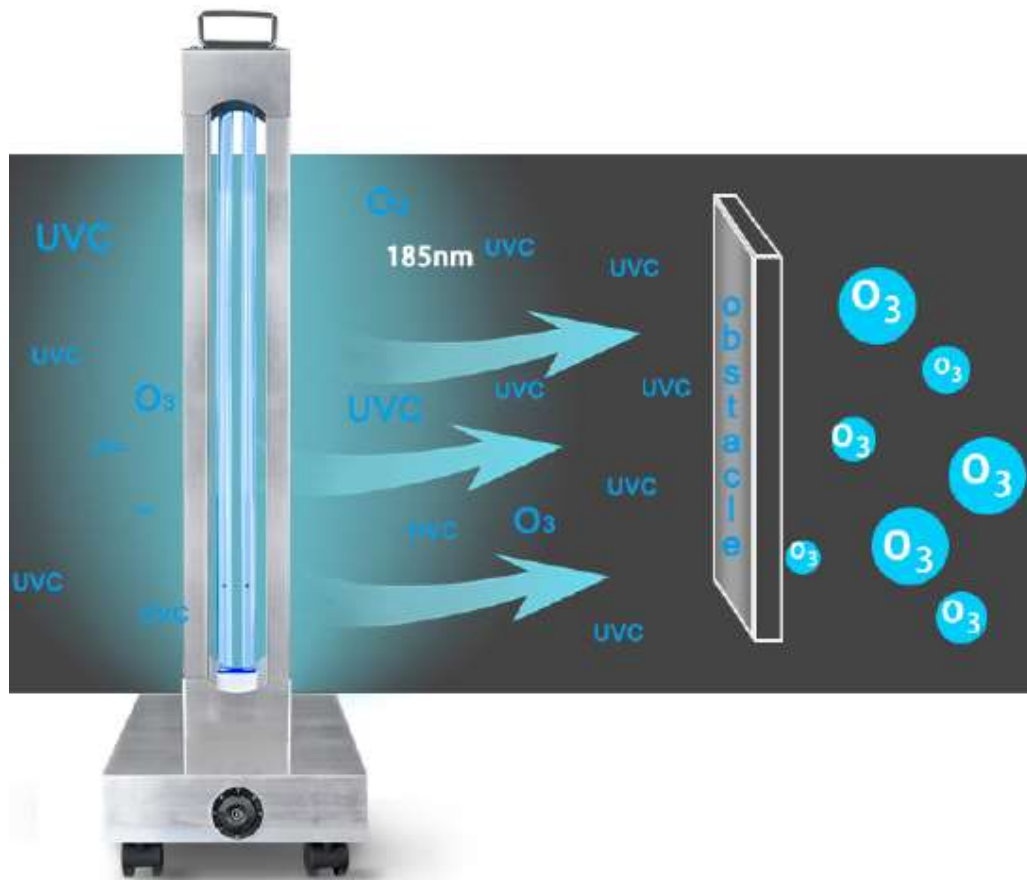

Working Instructions:

After turn on the time panel control, the UV disinfection lamp will be automatically light up after 15 seconds delay. People and animals must leave the UV radiation range to prevent ultraviolet rays harming

HIGH POWER UV DISINFECTION LAMP

Two kinds of UV Sterilization Lamp: Non-ozone and Ozone	
Non-ozone (253.7nm)	Ozone (185nm)
<p>Advantage: The principle of disinfection and sterilization by pure ultraviolet sunlight irradiation disinfection, only 20 minutes of ventilation can be used to enter the room after use, almost no residue after disinfection</p>	<p>Advantage: Dual UV + ozone disinfection 360° dead space-free disinfection and sterilization. In addition to radiation sterilization, it also supplements sterilization in placed where ozone-free deep disinfection is impossible, and it can also eliminate odor. In addition to formaldehyde</p>
<p>Disadvantage: There are dead spots that cannot be disinfected, ultraviolet rays cannot be penetrated.</p>	<p>Disadvantage: There will be a strong ozone odor during use, the ventilation time must be extended by more than 40 minutes</p>
<p>Application recommendation: It is recommended to use non-ozone lamps in empty rooms, rooms, without dead corners, and rooms with poor ventilation.</p>	<p>Disadvantage: There will be strong ozone odor during use; the ventilation time must be extended by more than 40 minutes.</p>
<p>Application recommendation: It is recommended to use non-ozone lamps in empty rooms, without dead corners and rooms with poor ventilation.</p>	<p>Application: large house/ multi-stack man sorry project/ dead corner/ long term exposure to sunlight and overlap with mold prone.</p>

HIGH POWER UV DISINFECTION LAMP

30 MINUTES STERILIZATION

360° FULL COVERAGE

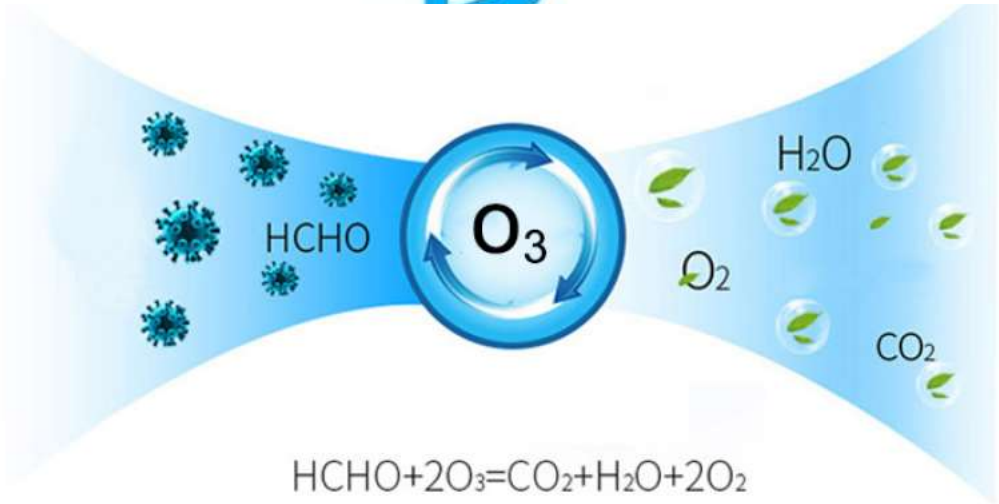

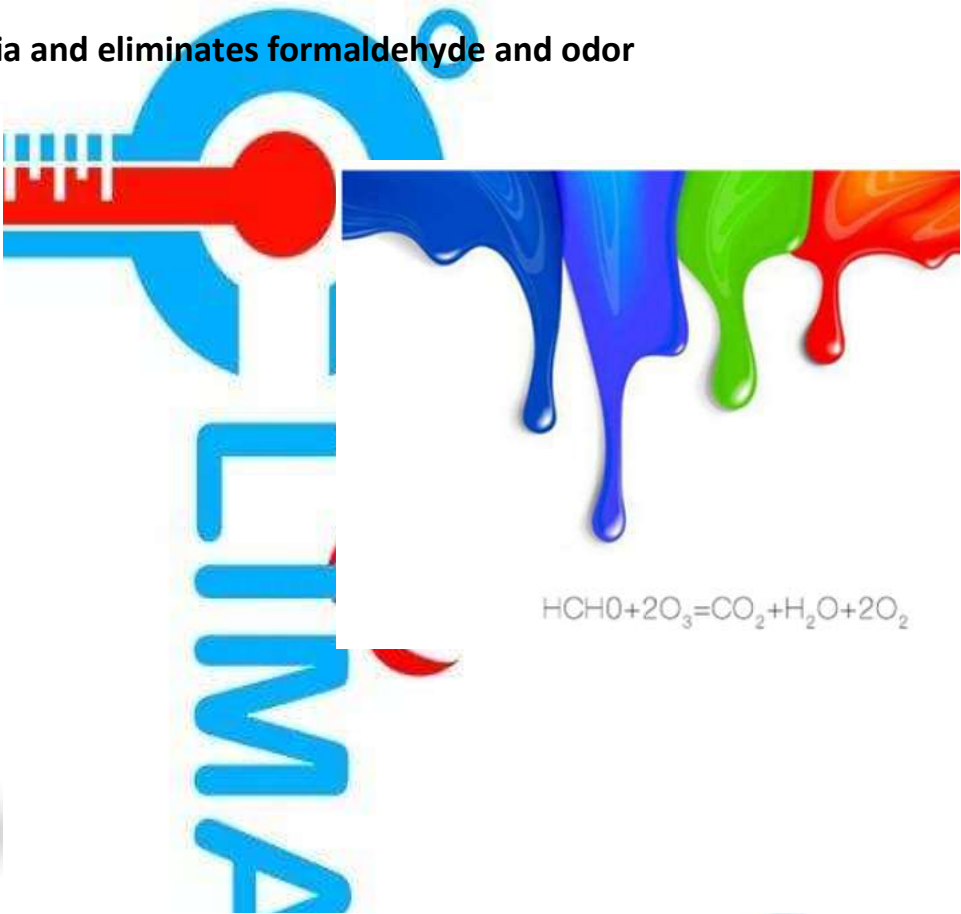

Unclean air flows into the room repeatedly, causing germs, formaldehyde, mites and other harmful substances to pose a serious threat to our health.

HIGH POWER UV DISINFECTION LAMP

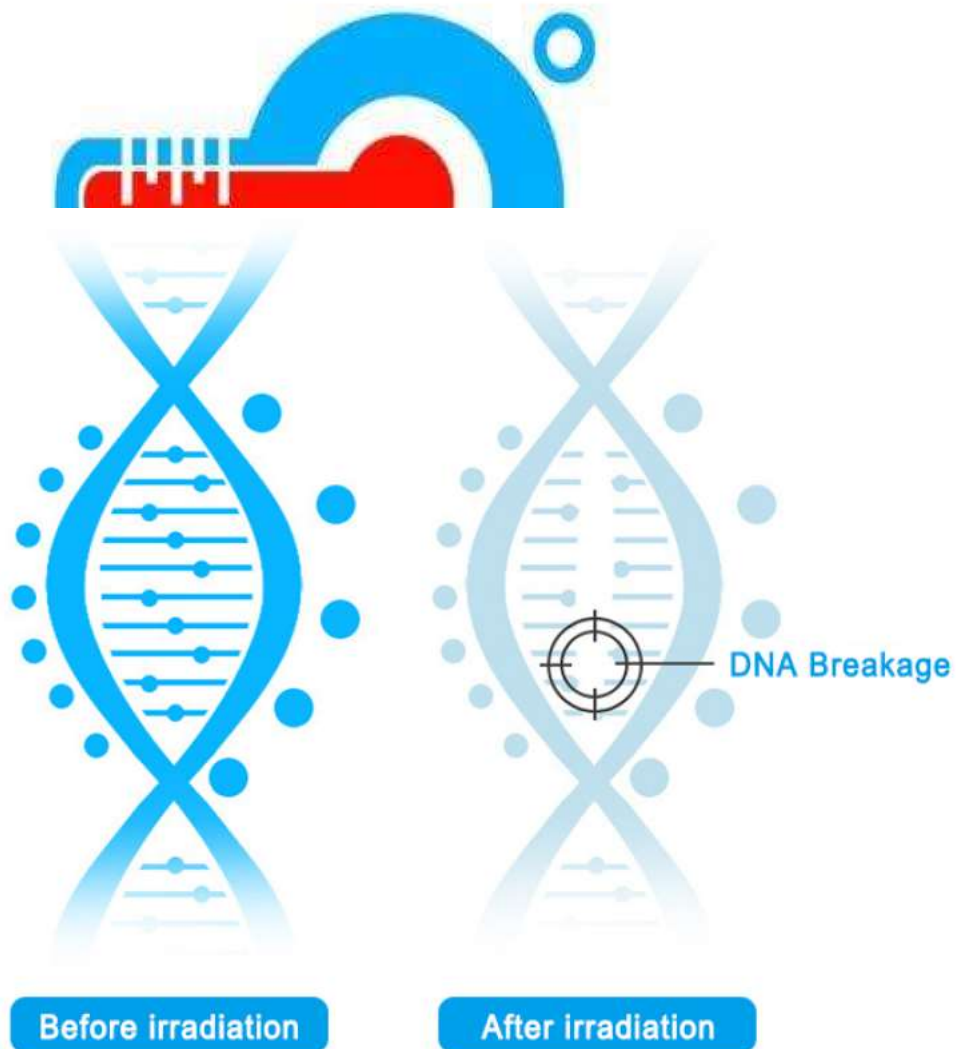

Dula UV Sterilization Lamp

Easily sterilizes, bacteria and eliminates formaldehyde and odor

HIGH POWER UV DISINFECTION LAMP

PRINCIPLE OF UV STERILIZATION

Ultraviolet kill microorganisms (bacteria, viruses, spores and other pathogens) through radiation damage to microorganisms and destroy the function of nucleic acids, to achieve the purpose of disinfection.

HIGH POWER UV DISINFECTION LAMP

APPLICATION

Kindergarten / School / Bedroom / Restaurant / Hospital/ Farms, etc.

WARNING

When using ultraviolet disinfection lamp, people and animals must leave the site! Long time contact with ultraviolet rays burn people's skin and eyes! After non-ozone ultraviolet disinfection, ventilation is required for 20_30 minutes.

When using ozone UV lamps, it is necessary to continue to close the door for more than 40 minutes after disinfection, and then open the door for entry after ventilation for 20-30 minutes.

Suggestion: do not directly irradiate the food; when disinfecting the bed, put the lamp on the bedside table or table instead of directly on the quilt sheet.
